

# EUROCAVE INOA SERIES

## COMPACT THROUGH-THE-WALL CLIMATE CONTROL SERIES

The Eurocave Inoa Series is one of the most silent single-unit wine cellar climate control units on the market. Utilising energy-saving technology, the Inoa does not function continuously and does not rely on the compressor very much. A unique remote control with a wireless management system enables remote management and accurate viewing of the wine cellar temperature. The Eurocave Inoa is an easy to install product as the evaporator and condenser are contained within the same unit.

### EUROCAVE RANGE

Inoa25: 10m<sup>3</sup> - 25m<sup>3</sup> (cubic metres). Dimensions: 1250 x 385 x 322mm (h x w x d)

Inoa50: 25m<sup>3</sup> - 50m<sup>3</sup> (cubic metres). Dimensions: 1250 x 385 x 322mm

Temperature range 10°C - 14°C depending on ambient conditions and level of insulation

Relative humidity with drip tray\*

Discreet and quiet: 44 - 50dB, subject to the cooling level

Ambient temperature range: -5°C/35°C

All in one wine cellar climate control unit - does not require external condenser

Includes wireless temperature remote

Lead time approx. 8-12 weeks

2 Year warranty

Single Phase 20A electrical isolator required at unit

Extra costs apply for flanges and evacuation kits as needed

20mm condensate pipe required

\*This unit is not plumbed and does not create humidity. Humidity inside your cellar will be approx 5-10 % lower than ambient. i.e. approx 50-70% in Western Cape, approx 60-80% in KZN, approx 40-70% in Gauteng. Normal aircons will drastically reduce humidity out of cellars to a much greater degree than our units
